The Model Context Protocol (MCP) as the "USB-C for AI

Key Point
Even the smartest AI is useless without context

Analogy
Like having different charging cables for every device-brand combination

The Magic
Instead of N×M integrations, we get N+M connections. One standard interface for all AI-to-tool communications

Foundation
Based on Language Server Protocol (LSP)

Power
AI can now discover, access, and act on real-world data dynamically

Game Changer
Build once, connect everywhere. True plug-and-play AI
